CLIFFCON™ JUMBOJACK

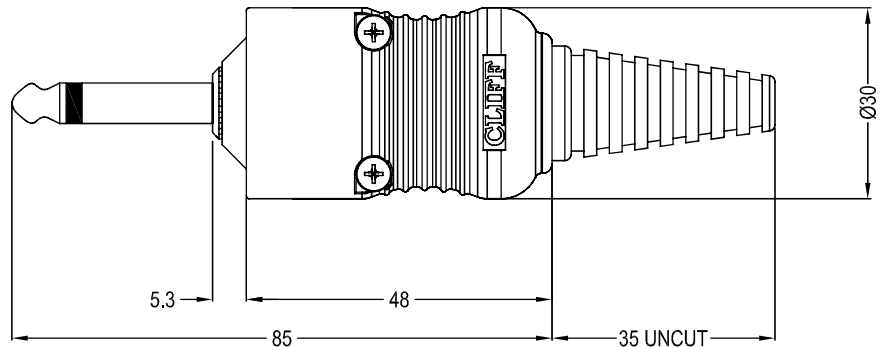

Cliffcon™ Jumbojack offers a solution to the problem of connecting large section cables to conventional ¼" jack plugs.

There are applications in professional sound installations, where it is necessary to link equipment with low resistance cables. Such cables tend to have large cross section conductors, and can have diameters up to 15mm. Connecting such cables to conventional jack plugs is difficult, due to the mismatch of size.

Cliffcon™ Jumbojack addresses this problem. It allows large diameter cable to be connected to conventional ¼" jack plug contacts, and has large / secure screw type cable clamps, to keep the cable in place. The cable grommet is useable up to Ø12.5mm. For Ø15mm, discard the grommet.
